I. Introduction

Rudd and Wisdom, Inc. has been retained by the Texas Health and Human Services Commission (HHSC) to develop the state fiscal year 2010 (FY2010, September 1, 2009 through August 31, 2010) premium rates for health plans participating in the Texas Children's Health Insurance Program (CHIP). This report presents the rating methodology and assumptions used in developing the premium rates.

Rudd and Wisdom has provided actuarial services to the Texas Medicaid program for over 20 years. We have participated in the state's Medicaid managed care rating process since its inception in 1993 and in developing premium rates for CHIP plans since that program's inception in 2000. This year, as in previous years, we have worked closely with HHSC in developing the FY2010 CHIP premium rates.

Rudd and Wisdom has relied on the following data sources as provided by HHSC, the participating health plans and the agency's External Quality Review Organization (EQRO):

- Monthly enrollment by age group for each health plan. This includes historical enrollment since September 2005 and a projection of future enrollment through August 2010.
- Claim lag reports by age group for each health plan for the period September 2005 through March 2009. These reports were provided by the health plans and include monthly paid claims by month of service.
- Financial Statistical Reports (FSR) for each participating health plan for FY2007, FY2008 and the first six months of FY2009. The FSR contains detailed information regarding monthly enrollment, revenue, incurred claims and administrative expenses, as reported by the health plan.
- Reports from the EQRO summarizing their analysis of the health plan's encounter data.
- Reports from the health plans providing information on high volume claimants during the experience period.
- Current (FY2009) premium rates for each health plan.
- Information from both HHSC and the health plans regarding recent changes in covered services and provider reimbursement under the State Medicaid and CHIP programs.
- Information from the health plans regarding current and projected payment rates for certain capitated services, such as mental health and vision.
- FY2008 acuity risk adjustment analysis prepared by the EQRO for each participating health plan.
- Information from the health plans regarding current and projected reinsurance premium rates.
- Information from HHSC regarding FY2008 CHIP claims cost by health plan by type of service from the encounter database.
- Information from HHSC regarding FY2009 and proposed FY2010 Medicaid provider reimbursement rates.

Although the above data was reviewed for reasonableness, Rudd and Wisdom did not audit the data.

II. Overview of the Rate Setting Methodology

The actuarial model used to derive the FY2010 CHIP premium rates relies primarily on health plan financial experience. The historical claims experience data for each health plan was analyzed and estimates for the base period (FY2008) were developed. These estimates were then projected forward to FY2010 using assumed trend rates. Other plan expenditures such as capitated amounts, reinsurance costs and administrative expenses were added to the claims component in order to project the total FY2010 cost under the health plan. These projected total cost rates were determined separately for each health plan. The results of this analysis were then combined for all health plans in a service area in order to develop a set of community rates for each service area.

The health plans under review are located in the following service areas:

- Austin Area
- Corpus Christi Area
- Dallas Area
- El Paso Area
- Exclusive Provider Organization Area
- Fort Worth Area
- Houston Area
- Laredo Area
- Lubbock Area
- San Antonio Area

The Exclusive Provider Organization (EPO) plan serves 170 mostly rural Texas counties. The FY2010 premium rates for the EPO were developed using the same methodology as that used for all other CHIP health plans.

Premium rates were determined for the following age groups:

- Under Age One Year
- Ages 1 – 5
- Ages 6 - 14
- Ages 15 - 18

The services used in the analysis include the following:

- Inpatient Hospital
- Outpatient Hospital
- Physician Services
- Other Professional Services
- Lab, X-ray and Radiology Services
- Medical Supplies
- Behavioral Health Services
- EPSDT Medical Services
- Family Planning and Genetics Services
- Hearing Services
- Home Health Services

- Emergency Room Services
- Ambulance Services
- Vision Services

Services specifically excluded from the analysis include:

- Prescription Drugs
- Dental and Orthodontia Services

After accumulating all of the information to be used in the rate setting process, a comparison of the various sources of claims data was performed to check for consistency. We compared (i) the claim lag reports provided by the health plans, (ii) the claim amounts included in the FSRs and (iii) the claim amounts in the encounter data files as provided by the EQRO. There was satisfactory consistency between the three claims data sources for each of the health plans.

We projected the FY2010 cost for each individual health plan by estimating their base period (FY2008) average claims cost and then applying trend and other adjustment factors. (These adjustment factors are described in more detail in Section III.) We added capitation expenses for services capitated by the health plan (such as vision and behavioral health), a net cost of reinsurance, a reasonable provision for administrative expenses and a risk margin. Attachment 2 presents a description and an example of the experience analysis for a sample health plan. This type of analysis was conducted on the experience of each participating CHIP health plan.

The analysis of base period claims experience for each health plan attempted to identify and adjust for any distortions in the data. Significant variations in experience, including the impact from unusually large individual claims, were investigated and adjustments were made if deemed appropriate.

HHSC utilized the combination of two rating methodologies in setting the FY2010 CHIP premium rates – individual plan experience rating and community rating. The individual plan experience rating method is described above and documented in Attachment 2. The community rates are developed by a weighted average of the projected FY2010 cost for each health plan in the service area (from the individual plan experience rating method). The weights used in this formula are the projected FY2010 number of members enrolled in each health plan by age group. Attachment 3 presents the summary community rating exhibit for each service area along with a description of the analysis.

The base community rate in each service area was adjusted to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of acuity risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective memberships. Additional information regarding risk adjustment is included in Section III below under Risk Adjustment and in Attachment 5.

The FY2010 CHIP health plan premium rates were then defined as the following: the minimum of (a) 110% of the rate developed using the individual experience of the plan and (b) the maximum of (i) community rate with full risk adjustment, (ii) community rate

without risk adjustment and (iii) 92.5% of the rate developed using the individual experience of the plan. Any resulting rate decrease was limited to 10%.

In addition to the premium, HHSC pays the CHIP health plans a \$3,100 delivery supplemental payment (DSP) per maternity delivery. Additional information regarding DSP is included in Attachment 6.

III. Adjustment Factors

This section contains a description of the adjustment factors used in the FY2010 CHIP rate setting process.

Trend Factors

The rating methodology uses assumed trend factors to adjust the base period claims cost to the projection period. The cost trend factors used in this analysis are a combination of utilization and inflation components. The projected trend rate assumptions were developed by the actuary based on an analysis of recent experience under the CHIP program. The analysis included a review of HMO and EPO claims experience data through March, 2009. This analysis was used to select an annual trend rate assumption of 5.15% for FY2009 and 5.0% for FY2010 for each health plan.

Provider Reimbursement Adjustment

There were several significant revisions to the Texas Medicaid fee schedule which were included in the CHIP rating analysis. Reimbursement increases were provided for the following services: rural health clinics, federally qualified health centers, ambulatory surgical centers, sonograms, increase in the number of recommended EPSDT screens and the new developmental and autism screenings. In addition, an adjustment was made to recognize the change in Medicaid reimbursement for three hospitals from DRG to cost basis (TEFRA).

The rating adjustments for these provider reimbursement changes were calculated by applying actual health plan encounter data to the old and new reimbursement basis and the resulting impact determined. As a result of problems with the FY2008 CHIP encounter data, FY2007 data was used in developing some of these estimates. Attachment 4 presents a summary of the derivation of these adjustment factors.

Risk Adjustment

Several risk adjustment techniques are employed in the rate setting methodology. Premium rates are established separately by area and age group in order to recognize the inherent geographical and demographical variation in the cost of delivering care. In an attempt to treat the health plans more equitably regarding maternity expenses, the methodology includes a separate payment for maternity services. The rating methodology also includes a health status adjustment.

The base community rate in each service area was adjusted to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective members. The risk analysis was performed by the University of Florida's Institute for Child Health Policy (ICH). The methodology used to incorporate the acuity risk adjustment is the Chronic Illness and Disability Payment System (CDPS). Additional information regarding risk adjustment is included in Attachment 5.

Although the results of the risk adjustment analysis were reviewed for reasonableness, Rudd and Wisdom did not audit the risk adjustment data or the results of ICHP's analysis.

IV. Administrative Fees and Risk Margin

The rating methodology includes an explicit provision for health plan administrative services. The amount allocated for administrative expenses is the greater of (a) \$10.00 per member per month (pmpm) plus 5.75% of gross premium and (b) \$15.00 pmpm. This amount is intended to provide for all administrative-related services performed by the HMO.

The premium rates also include an amount for premium tax (1.75% of premium), maintenance tax (\$0.09 pmpm) and a risk margin (2.0% of premium).

V. CHIP Perinatal

Since January 1, 2007, a new group of clients have been covered under the CHIP program – CHIP Perinatal. The purpose of this program is to extend CHIP services to unborn children of certain non-Medicaid eligible women. Newborns under this program receive the same benefits as current CHIP participants. There is no cost sharing applied to these participants. Also, for those newborns under 185% of the Federal Poverty Level (FPL), the initial inpatient facility cost will not be the financial responsibility of the health plan. Those costs will be carved-out and paid under Medicaid. All costs (including those for the initial inpatient facility stay) for newborns between 185% and 200% FPL are the responsibility of the health plan.

The CHIP benefits provided to expectant mothers are more limited in scope. They include the professional component of delivery services (for those clients under 185% FPL) and limited prenatal and post-natal services only. There will be no cost sharing applied to these participants.

We have developed premium rates for four categories of clients: (1) newborns under 185% of the Federal Poverty Level (FPL); (2) newborns between 185% and 200% FPL; (3) expectant mothers under 185% FPL; and (4) expectant mothers between 185% and 200% FPL.

The CHIP Perinatal FY2010 premium rates were derived using a methodology very similar to that described in Section II above for CHIP. Attachment 7 presents a description of the rating methodology used in developing the FY2010 CHIP Perinatal rates.

VI. CHIP Dental

The actuarial model used to derive the FY2010 CHIP Dental premium rates relied on recent dental plan financial experience. Historical claims experience data for the dental plan was analyzed and estimates for the FY2008 base period were developed. The claims experience was trended forward to FY2010 using assumed trend rates. Provisions for administrative expenses, taxes and risk margin were added to the projected claims to produce the FY2010 premium rates.

Attachment 8 includes additional documentation regarding the rate calculation for CHIP Dental.

VII. Summary

The chart below presents results of the FY2010 CHIP rating analysis.

Health Plan	Regular CHIP

Attachment 2

Individual Health Plan Experience Analysis

The following exhibits present a summary of the experience analysis performed for each participating health plan. These exhibits use hypothetical experience data from a sample health plan. The actual analysis is based on experience data provided by each plan. This data was checked for reasonableness by comparing to other data sources provided by HHSC, the EQRO and the health plan. Below is a brief description of each of the exhibits contained in this attachment.

Exhibit A. This exhibit shows monthly enrollment and earned premium by age group for the period September 2005 through March 2009. This information was provided by HHSC.

Exhibit B. This exhibit shows a sample of a claim lag report. This report includes claim amounts by payment month and month of service. We analyzed claims experience for each plan by age group for the period September 2005 through March 2009.

Exhibit C. This exhibit shows the calculation of estimated monthly incurred claims. The exhibit includes the following information: (i) monthly enrollment, (ii) claim amounts incurred in that month and paid through March, 2009, (iii) estimated proportion of that month's incurred claims paid through March, 2009 (completion factor), (iv) estimated incurred claims, (v) estimated incurred claims pppm and (vi) the ratio of this month's incurred claims pppm to the same statistic from one year ago (trend factor). The assumed completion factors and estimated incurred claims were derived based on the actual historical claims payment pattern of the health plan.

Exhibit D. This exhibit is a summary of the sample health plan's projected FY2010 cost based on the plan's actual experience. The top of the exhibit shows summary base period (FY2008) enrollment, premium and claims experience. Trend assumptions for FY2009 and FY2010 are used to project the average base period claims cost to FY2010. Following that are several adjustments for benefit and provider reimbursement changes.

In addition to incurred claims, provision is also made for services that are capitated by the health plan, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance, an assumption is made regarding how much the plan is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$1.00 pppm.

The rating methodology includes an explicit provision for administrative expenses. The amount allocated for administrative expenses is the greater of (a) \$10.00 pppm plus 5.75% of gross premium and (b) \$15.00 pppm. Provisions are also included for risk margin (2.0% of gross premium), premium tax (1.75%) and maintenance tax (\$.09 pppm).

At the bottom of Exhibit D is a summary of the projected FY2010 cost based on the above assumptions

Attachment 3

Community Experience Analysis

The following exhibits present a summary of the experience analysis performed for each service area. HHSC utilizes an adjusted community rating methodology in setting the CHIP premium rates. The base community rates by age group vary by service area but are the same for each health plan in a service area. The community rates are developed by a weighted average of the projected FY2010 cost for each health plan in the service area. The weights used in this formula are the projected number of FY2010 members enrolled in each health plan.

Below is a brief description of each of the exhibits contained in the attachment. The exhibits present the derivation of the FY2010 CHIP HMO community premium rates for the following service areas:

- Exhibit A – Austin Area
- Exhibit B – Corpus Christi Area
- Exhibit C – Dallas Area
- Exhibit D – El Paso Area
- Exhibit E – Exclusive Provider Organization (EPO) Area
- Exhibit F – Fort Worth Area
- Exhibit G – Houston Area
- Exhibit H – Laredo Area
- Exhibit I – Lubbock Area
- Exhibit J - San Antonio Area

These exhibits show projected FY2010 experience for each of the service areas. These amounts were derived by summing amounts from each individual health plan in the service area. The experience analysis for individual HMOs is described in Attachment 2. The top portion of the exhibit shows summary base period (FY2008) experience. Following that are projected FY2010 enrollment, premium and incurred claims experience.

In addition to incurred claims, provision is also made for services that are capitated by the HMOs, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance we make an assumption regarding how much the HMO is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$1.00 pppm.

The amount allocated for administrative expenses is the greater of (a) \$10.00 pppm plus 5.75% of gross premium and (b) \$15.00 pppm. Provisions are also included for risk margin (2.0% of gross premium), premium tax (1.75%) and maintenance tax (\$.09 pppm).

At the bottom of the exhibit is a summary of the projected FY2010 cost based on these assumptions.

Attachment 4

Provider Reimbursement Adjustments

This attachment presents information regarding the various provider reimbursement adjustments considered in the rating analysis and how the adjustment factors were developed.

There were several significant revisions to the Texas Medicaid fee schedule which were included in the CHIP rating analysis. Reimbursement increases were provided for the following services: rural health clinics, federally qualified health centers, ambulatory surgical centers, sonograms, increase in the number of recommended EPSDT screens and new developmental and autism screenings services. In addition, an adjustment was made to recognize the change in Medicaid reimbursement for three hospitals from DRG to cost basis (TEFRA).

The rating adjustments for these provider reimbursement changes were calculated by applying actual health plan encounter data to the old and new reimbursement basis and the resulting impact determined. As a result of problems with the FY2008 CHIP encounter data, FY2007 data was used in developing some of these estimates.

Effective September 1, 2009, CHIP health plans will be required to pay Rural Health Clinics and Federally Qualified Health Centers the full encounter rate for visits. Attached Exhibit A presents an estimate of the cost impact resulting from this requirement. The FY2010 rates were also adjusted for changes in the reimbursement for ambulatory surgical centers, obstetrical sonograms, and three DRG hospitals changing to TEFRA-based reimbursement. Attached Exhibits B, C, and D present the estimated cost impact from these changes. Attachments E and F present the calculation of the estimated cost impact from the increase in the number of recommended EPSDT screens and new developmental and autism screenings services, respectively.

Attachment 5

Acuity Risk Adjustment

The rate setting methodology incorporates a risk adjustment technique that is designed to adjust the base community rate in each service area to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of acuity risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective members. The risk analysis was performed by the University of Florida's Institute for Child Health Policy (ICHP). The methodology used to incorporate the risk adjustment is the Chronic Illness and Disability Payment System (CDPS). The attached exhibits (provided by ICHP) present a summary of the risk adjustment analysis. There is a separate exhibit for each age group.

The column titled Case Mix on the chart is the acuity risk adjustment factor. It is the ratio of the predicted average cost of the individual health plan's membership divided by the predicted average cost of the entire service area's membership. The risk adjustment factor is applied to the community rate for each health plan and age group.

Attachment 6

Delivery Supplemental Payment

The rate setting methodology includes a risk adjustment technique designed to provide uniform treatment of the health plans for costs related to maternity services. In order to recognize the potential inequity that might arise between health plans with respect to the proportion of maternity cases, HHSC reimburses each plan \$3,100 for each birth.

Attachment 7

CHIP Perinatal Rating

Since January 1, 2007, a new group of clients have been covered under the CHIP program – CHIP Perinatal. The purpose of this program is to extend CHIP services to unborn children of certain non-Medicaid eligible women. Newborns under this program receive the same benefits as current CHIP participants. There is no cost sharing applied to these participants. Also, for those newborns under 185% of the Federal Poverty Level (FPL), the initial inpatient facility cost will not be the financial responsibility of the health plan. Those costs will be carved-out and paid under Medicaid. All costs (including those for the initial inpatient facility stay) for newborns between 185% and 200% FPL are the responsibility of the health plan.

The CHIP benefits provided to expectant mothers are more limited in scope. They include the professional component of delivery services (for those clients under 185% FPL) and limited prenatal and post-natal services only. There will be no cost sharing applied to these participants.

We have developed premium rates for four categories of clients: (1) newborns under 185% of the Federal Poverty Level (FPL); (2) newborns between 185% and 200% FPL; (3) expectant mothers under 185% FPL; and (4) expectant mothers between 185% and 200% FPL.

The CHIP Perinatal FY2010 premium rates were derived using a methodology very similar to that described in Section II above for CHIP. Below is a description of the trend, benefit and provider reimbursement adjustments, risk adjustment and administrative cost provisions included in the CHIP Perinatal rates.

Trend Factors

The rating methodology uses assumed trend factors to adjust the base period claims cost to the projection period. The cost trend factors used in this analysis are a combination of utilization and inflation components. The projected trend rate assumptions were developed by the actuary based on an analysis of recent experience under the CHIP Perinatal program. The analysis included a review of claims experience data through March, 2009.

CHIP Perinatal is a relatively new program and it wasn't until FY2008 that the program had accumulated enough membership to perform an appropriate trend analysis. Therefore, the only reasonable trend information available is from comparing the cost in the early months of FY2009 to that for the early months of FY2008. Exhibit C of Attachment 7 presents the program's experience trends for the period September 1, 2008 through January 2009. This analysis was used to select the trend rate assumptions used in the rating analysis. The chart below presents the assumed annual trend rates for FY2009 and FY2010.

	<u>FY2009</u>	<u>FY2010</u>
Newborns Under 185% FPL	7.9 %	7.9 %
Newborns 185-200% FPL	7.9 %	7.9 %
Perinates Under 185% FPL	15.1 %	10.0 %
Perinates 185-200% FPL	15.1 %	10.0 %

Provider Reimbursement Adjustment

The types of adjustments for benefit and provider reimbursement changes, and the methodology for estimating the cost impact of the changes, are the same for CHIP Perinatal as described in Section III above for CHIP. Exhibit D presents a summary of the adjustment factors.

Administrative Fees and Risk Margin

The rating methodology includes an explicit provision for health plan administrative services. The amount allocated for administrative expenses is \$12.50 pppm plus 5.75% of gross premium. This amount is intended to provide for all administrative-related services performed by the HMO.

The premium rates also include a provision for premium tax (1.75% of premium), maintenance tax (\$0.09 pppm) and a risk margin (2.0% of premium).

Summary

Exhibit B of Attachment 7 presents the summary community rating exhibit for each service area along with a description of the analysis. Exhibit A of Attachment 7 presents additional information regarding the FY2010 CHIP Perinatal rates including a comparison to FY2009 rates. The enrollment in both the Newborn 185-200% FPL and Perinate 185-200% FPL risk groups are so small that credible rates could not be set by area. Thus the rates for these two risk groups were calculated on a statewide basis. In addition to the premium, HHSC pays the health plans a \$3,100 delivery supplemental payment (DSP) per maternity delivery for those CHIP Perinatal clients between 185% and 200% FPL.

Attachment 8

CHIP Dental Rating

The actuarial model used to derive the FY2010 CHIP Dental premium rates relies on recent dental plan financial experience. Historical claims experience data for the dental plan was analyzed and estimates for the base period (September, 2007 through August, 2008) were developed. The claims experience was trended forward to FY2010 using assumed annual trend rates of 6.3% for FY2009 and 5.0% for FY2010. Provisions for administrative expenses, taxes and risk margin were added to the projected claims to produce the FY2010 premium rates.

Attached Exhibit C presents a summary of historical Dental Plan claims experience. Based on this analysis, the trend in incurred claims pmpm was 6.3% for the period September 2008 through April 2009. Thus 6.3% was selected as the assumed trend for FY2009.

Attached Exhibit A presents a summary of the experience analysis performed for the CHIP dental plan. The top portion of the exhibit shows summary FY2008 base period experience. Following that is projected FY2010 enrollment, premium and incurred claims experience.

The amount allocated for administrative expenses is \$1.06 pmpm. Provision is also included for risk margin (2.0% of gross premium), premium tax (1.75%) and maintenance tax (\$.03 pmpm).

The bottom of the exhibit shows a summary of the projected FY2010 cost based on these assumptions and the experience rate increase applied to the three rate tiers.

Exhibit B presents the FY2010 premium rates for the three rate tiers. The FY2010 per-capita rates are determined as the FY2009 rates increased by the experience rate increase by age calculated on Exhibit A, as described above.
