## I. Introduction

Rudd and Wisdom, Inc. has been retained by the Texas Health and Human Services Commission (HHSC) to develop the state fiscal year 2016 (FY2016, September 1, 2015 through August 31, 2016) premium rates for health plans participating in the Texas Children's Health Insurance Program (CHIP). This report presents the rating methodology and assumptions used in developing the premium rates.

Rudd and Wisdom has provided actuarial services to the Texas Medicaid program for over 30 years. We have participated in the state's Medicaid managed care rating process since its inception in 1993 and in developing premium rates for CHIP plans since that program's inception in 2000. This year, as in previous years, we have worked closely with HHSC in developing the FY2016 CHIP premium rates.

Rudd and Wisdom has relied on the following data sources as provided by HHSC, the participating health plans and the agency's External Quality Review Organization (EQRO):

- Monthly enrollment by age group for each health plan. This includes historical enrollment since September 2011 and a projection of future enrollment through August 2016. These projections were prepared by HHSC.
- Claim lag reports by age group for each health plan for the period September 2011 through February 2015. These reports were provided by the health plans and include monthly paid claims by month of service.
- Financial Statistical Reports (FSR) for each participating health plan for FY2013, FY2014 and the first six months of FY2015. The FSR contains detailed information regarding monthly enrollment, revenue, incurred claims and administrative expenses, as reported by the health plan. These reports were prepared by HHSC.
- Reports from the EQRO summarizing their analysis of the health plan's encounter data.
- Reports from the health plans providing information on high volume claimants during the experience period.
- Current (FY2015) premium rates for each health plan.
- Information from both HHSC and the health plans regarding recent changes in covered services and provider reimbursement under the State Medicaid and CHIP programs.
- Information from the health plans regarding current and projected payment rates for certain capitated services, such as mental health and vision.
- FY2014 acuity risk adjustment analysis prepared by the EQRO for each participating health plan.
- Information from the health plans regarding current and projected reinsurance premium rates.
- Information provided by HHSC regarding FY2014 CHIP health plan claims cost by type of service for certain services. This information was obtained from the encounter database.

- Information from HHSC regarding FY2015 and proposed FY2016 Medicaid provider reimbursement rates.

After accumulating all of the information to be used in the rate setting process, a comparison of the various sources of claims data was performed to check for consistency. We compared the claims paid amount from (i) the claim lag reports provided by the health plans, (ii) the audited FSRs and (iii) the encounter data files as provided by the EQRO. All comparisons were done by risk group as well as in aggregate. In the case of inconsistent information follow up inquiries were made with each applicable HMO until all information was corrected and reconciled with the other data sources. Ultimately there was satisfactory consistency between all data sources. Although the above data was reviewed for reasonableness, Rudd and Wisdom did not audit the data.

In addition, HHSC employs the Institute for Child Health Policy (ICHP) as an External Quality Review Organization. ICHP reviews the encounter data and provides certification of the data quality. Below is an excerpt from the data certification report for the detail encounter period September 1, 2013 through August 31, 2014 (FY2014).

*Based on an administrative review, the EQRO considers the required data elements for all MCO/RSA combination in CHIP to be accurate and complete, meeting the following components of Texas Government Code § 533.0131 for data certification purposes:*

1. *The encounter data for the most recent measurement year are complete, accurate, and reliable.*
2. *No statistically significant variability in the encounter data is attributable to incompleteness, inaccuracy, or other deficiency as compared to equivalent data for similar populations and when evaluated against professionally accepted standards.*

## II. Overview of the Rate Setting Methodology

This report details the development of the medical component of the total premium rate. Information regarding the carve-in of prescription drugs into the CHIP program can be found in the report titled “State of Texas Medicaid Managed Care Rate Setting Pharmacy Carve-in State Fiscal Year 2016”.

The actuarial model used to derive the FY2016 CHIP premium rates relies primarily on health plan financial experience. The historical claims experience data for each health plan was analyzed and estimates for the FY2014 base period were developed. These estimates were then projected forward to FY2016 using assumed trend rates. Other plan expenditures such as capitated amounts, reinsurance costs and administrative expenses were added to the claims component in order to project the total FY2016 cost under the health plan. These projected total cost rates were determined separately for each health plan. The results of this analysis were then combined for all health plans in a service area in order to develop a set of community rates for each service area.

The health plans under review are located in the following service areas:

- Bexar County Service Area (San Antonio)
- Dallas County Service Area (Dallas)
- El Paso County Service Area (El Paso)
- Harris County Service Area (Houston)
- Jefferson County Service Area (Jefferson)
- Lubbock County Service Area (Lubbock)
- Nueces County Service Area (Corpus Christi)
- Tarrant County Service Area (Fort Worth)
- Travis County Service Area (Austin)
- Rural County Service Area (All other Texas regions)

Premium rates were determined for the following age groups:

- Children Under Age One Year
- Children Ages 1 to 5 Years
- Children Ages 6 to 14 Years
- Children Ages 15 to 18 Years

The services used in the analysis include the following:

- Inpatient Hospital
- Outpatient Hospital
- Physician Services
- Other Professional Services
- Lab, X-ray and Radiology Services
- Medical Supplies
- Behavioral Health Services
- EPSDT Medical Services
- Family Planning and Genetics Services
- Hearing Services

- Home Health Services
- Emergency Room Services
- Ambulance Services
- Vision Services
- Prescription Drugs

Services specifically excluded from the analysis include:

- Dental and Orthodontia Services

We projected the FY2016 cost for each individual health plan by estimating their base period (FY2014) average claims cost and then applying trend and other adjustment factors. (These adjustment factors are described in more detail in Section III.) We added capitation expenses for services capitated by the health plan (such as vision and behavioral health), a net cost of reinsurance, a reasonable provision for administrative expenses and a risk margin. Attachment 2 presents a description and an example of the experience analysis for a sample health plan. This type of analysis was conducted on the experience of each participating CHIP health plan.

The analysis of base period claims experience for each health plan attempted to identify and adjust for any distortions in the data. Significant variations in experience, including the impact from unusually large individual claims, were investigated and it was determined that no adjustments were necessary.

HHSC utilized the combination of two rating methodologies in setting the FY2016 CHIP premium rates – individual plan experience rating and community rating. The individual plan experience rating method is described above and documented in Attachment 2. The community rates are developed by a weighted average of the projected FY2016 cost for each health plan in the service area (from the individual plan experience rating method). The weights used in this formula are the projected FY2016 number of members enrolled in each health plan by age group. Attachment 3 presents the summary community rating exhibit for each service area along with a description of the analysis.

The base community rate in each service area was adjusted to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of acuity risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective memberships. Additional information regarding risk adjustment is included in Section III below under Risk Adjustment and in Attachment 5.

The FY2016 CHIP health plan premium rates were then defined as the following: the minimum of (a) 110% of the rate developed using the individual experience of the plan and (b) community rate with risk adjustment. The enrollment for children under age one is so small that credible rates could not be set by area. As a result the rate for this risk group was calculated on a statewide basis.

In addition to the premium, HHSC pays the CHIP health plans a \$3,100 delivery supplemental payment (DSP) per maternity delivery. Additional information regarding DSP is included in Attachment 6.

### **III. Adjustment Factors**

This section contains a description of the adjustment factors used in the FY2016 CHIP rate setting process.

#### ***Trend Factors***

The rating methodology uses assumed trend factors to adjust the base period claims cost to the projection period. The cost trend factors used in this analysis are a combination of utilization and inflation components. The projected trend rate assumptions were developed by the actuary based on an analysis of recent experience under the CHIP program. A single trend assumption applies to all service areas but varies by projection year (FY2015 and FY2016).

The trend analysis included a review of HMO and RSA claims experience data through February 28, 2015. Based on this information, estimates of monthly incurred claims were made through December 2014. The claims cost and trend experience was reviewed separately by service area. The service area trends were then combined into a statewide average using a weighted average formula with estimated incurred claims as the weights.

The FY2015 trend assumption was developed from two components: (i) the actual estimated trend for the period September 2014 through December 2014 and (ii) the projected trend for the period January 2015 through August 2015. The experience trends for all time periods were adjusted to remove the impact of various provider reimbursement reductions and revisions that have impacted the program. We have assumed the trend for the period January 2015 through August 2015 and all of FY2016 will be 5%.

This analysis was used to select an annual trend rate assumption of 5.2% for FY2015 and 5.0% for FY2016.

#### ***Provider Reimbursement and Benefit Revision Adjustment***

There were several significant revisions to the Texas Medicaid fee schedule which were included in the CHIP rating analysis. Provider reimbursement and benefit changes were recognized for the following services:

- Inpatient Hospital Reimbursement Change
- Potentially Preventable Readmissions Reduction
- Potentially Preventable Complications Reduction
- Limit Related Party Reimbursement to 100% of Medicaid
- Rural Hospital Outpatient Reimbursement Change
- Therapy Reimbursement Reduction

The rating adjustments for these provider reimbursement were calculated by applying actual health plan encounter data to the old and new reimbursement basis and the resulting impact determined. Attachment 4 presents a summary of the derivation of these adjustment factors.

### ***Risk Adjustment***

Several risk adjustment techniques are employed in the rate setting methodology. Premium rates are established separately by area and age group in order to recognize the inherent geographical and demographical variation in the cost of delivering care. In an attempt to treat the health plans more equitably regarding maternity expenses, the methodology includes a separate payment for maternity services. The rating methodology also includes a health status adjustment.

The base community rate in each service area was adjusted to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective members. The risk analysis was performed by the University of Florida's Institute for Child Health Policy (ICHP). The methodology used to incorporate the acuity risk adjustment is the Chronic Illness and Disability Payment System (CDPS). Additional information regarding risk adjustment is included in Attachment 5.

Although the results of the risk adjustment analysis were reviewed for reasonableness, Rudd and Wisdom did not audit the risk adjustment data or the results of ICHP's analysis.

### ***Pay-for-Quality Program (P4Q)***

The CHIP Program includes the Quality Challenge Program. It creates incentives and penalties for all health plans based on their performance on certain quality measures. Health plans that excel on meeting the measures are eligible for a bonus of up to 4 percent of their capitation rate; health plans that don't meet their measures can lose up to 4 percent of their capitation rate. In aggregate all premium dollars recouped through penalties are dispersed back to the health plans eligible for the quality bonus. In sum, this program is budget neutral and does not result in a net gain or a net loss from the aggregate premium rates certified in this report. We have reviewed the various measures and have concluded that it is reasonable to expect the health plans to achieve the targeted quality measures and no further adjustment to the premium rates are necessary. Attachment 9 presents further information regarding the P4Q Program and its measures.

#### IV. Administrative Fees, Taxes and Risk Margin

The rating methodology includes an explicit provision for health plan administrative services. The amount allocated for administrative expenses is \$8.00 per member per month (pppm) plus 5.75% of gross premium. This amount is intended to provide for all administrative-related services performed by the HMO.

The premium rates also include an amount for premium tax (1.75% of premium), maintenance tax (\$0.07 pppm) and a risk margin (2.0% of premium).

The capitation rates included in this document do not include provision for the Affordable Care Act (ACA) Health Insurance Providers Fee. HHSC has developed a procedure for reimbursing the MCOs for (i) the ACA Health Insurance Providers Fee, (ii) any applicable federal income tax impact resulting from payment of the ACA Health Insurance Providers Fee and (iii) any applicable state premium tax impact resulting from payment of the ACA Health Insurance Providers Fee. Such reimbursement will be provided based on a CMS-approved methodology.

## V. CHIP Perinatal

Since January 1, 2007, a new group of clients has been covered under the CHIP program – CHIP Perinatal. The purpose of this program is to extend CHIP services to unborn children of certain non-Medicaid eligible women. Newborns under this program receive the same benefits as current CHIP participants. There is no cost sharing applied to these participants.

The CHIP benefits provided to expectant mothers are more limited in scope. They include the professional component of delivery services (for those clients under 198% FPL) and limited prenatal and post-natal services only.

We have developed premium rates for three categories of clients: (1) newborns between 198% and 202% FPL; (2) expectant mothers under 198% FPL; and (3) expectant mothers between 198% and 202% FPL.

The CHIP Perinatal FY2016 premium rates were derived using a methodology very similar to that described in Section II above for CHIP. Attachment 7 presents a description of the rating methodology used in developing the FY2016 CHIP Perinatal rates.

## VI. CHIP Dental

The actuarial model used to derive the FY2016 CHIP Dental premium rates relied on recent dental plan financial experience. Historical claims experience data for the dental plans was analyzed and estimates for the base period January 1, 2014 through December 31, 2014 were developed. The claims experience was trended forward to FY2016 using assumed trend rates of 5.0% for FY2015 and FY2016.

Provisions for administrative expenses, taxes and risk margin were added to the projected claims to produce the FY2016 premium rates. Attachment 8 includes additional documentation regarding the rate calculation for CHIP Dental.

## VII. Summary

The chart below presents the results of the FY2016 CHIP rating analysis and includes all components of the premium – medical and prescription drug. This report details the development of the medical component of the premium. Further information regarding the prescription drug component of the premium rate can be found in the report titled “State of Texas Medicaid Managed Care Rate Setting Pharmacy Carve-in State Fiscal Year 2016”.

### VIII. Actuarial Certification of FY2016 CHIP HMO Premium Rates

I, Khiem D. Ngo, am a principal with the firm of Rudd and Wisdom, Inc., Consulting Actuaries (Rudd and Wisdom). I am a Fellow of the Society of Actuaries and a member of the American Academy of Actuaries. I meet the Academy's qualification standards for rendering this opinion.

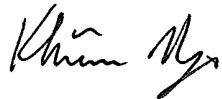

Rudd and Wisdom has been retained by the Texas Health and Human Services Commission (HHSC) to assist in the development of their state fiscal year 2016 (FY2016) managed care rate-setting methodology, assumptions and resulting premium rates and to provide the actuarial certification required under Centers for Medicare and Medicaid Services (CMS) requirements 42 CFR 438.6(c).

I certify that the FY2016 HMO premium rates developed by HHSC and Rudd and Wisdom satisfy the following:

- (a) The premium rates have been developed in accordance with generally accepted actuarial principals and practices;
- (b) The premium rates are appropriate for the populations and services covered under the managed care contract; and
- (c) The premium rates are actuarially sound as defined in the regulations.

We have relied on historical experience data and program information provided to us by HHSC. We have reviewed the data for reasonableness but have not audited the data.

Please note that actual health plan contractor experience will differ from these projections. Rudd and Wisdom has developed these rates on behalf of the State to demonstrate compliance with the CMS requirements under 42 CFR 438.6(c). Any health plan contracting with the State should analyze its own projected premium needs before deciding whether to contract with the State.

Khiem D. Ngo, F.S.A., M.A.A.A.

**Summary of FY2016 CHIP Rating Analysis**

The attached exhibit presents summary information regarding the FY2016 CHIP health plan rates. Included on the exhibit are current (FY2015) premium, split between medical, prescription drug, and delivery supplemental payment (DSP) rates; FY2016 premium, split between medical, prescription drug and DSP rates; and a comparison of FY2015 and FY2016 premium rates.

## FY2016 CHIP Rating Summary

Health Plan	Under Age 1	Ages 1-5	Ages 6-14	Ages 15-18	DSP
<b>Current (9/1/14-8/31/15) Medical Premium Rates pppm</b>					
Aetna - Bexar	137.13	96.93	65.38	75.71	3,100.00
Amerigroup - Bexar	137.13	58.45	42.15	51.26	3,100.00

## **Attachment 2**

### **Individual Health Plan Experience Analysis**

The following exhibits present a summary of the experience analysis performed for each participating health plan. These exhibits use hypothetical experience data from a sample health plan. The actual analysis is based on experience data provided by each plan. This data was checked for reasonableness by comparing to other data sources provided by HHSC, the EQRO and the health plan. Below is a brief description of each of the exhibits contained in this attachment.

Exhibit A. This exhibit shows monthly enrollment and earned premium by age group for the period September 2011 through February 2015. This information was provided by HHSC.

Exhibit B. This exhibit shows a sample of a claim lag report. This report includes claim amounts by payment month and month of service. We analyzed claims experience for each plan by age group for the period September 2011 through February 2015.

Exhibit C. This exhibit shows the calculation of estimated monthly incurred claims. The exhibit includes the following information: (i) monthly enrollment, (ii) claim amounts incurred in that month and paid through February, 2015, (iii) estimated proportion of that month's incurred claims paid through February, 2015 (completion factor), (iv) estimated incurred claims, (v) estimated incurred claims pmpm and (vi) the ratio of this month's incurred claims pmpm to the same statistic from one year ago (trend factor). The assumed completion factors and estimated incurred claims were derived based on the actual historical claims payment pattern of the health plan.

Exhibit D. This exhibit is a summary of the sample health plan's projected FY2016 cost based on the plan's actual experience. The top of the exhibit shows summary base period (FY2014) enrollment, premium and claims experience. Trend assumptions for FY2015 and FY2016 are used to project the average base period claims cost to FY2016. Following that are several adjustments for benefit and provider reimbursement changes.

In addition to incurred claims, provision is also made for services that are capitated by the health plan, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance, an assumption is made regarding how much the plan is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$0.75 pmpm.

The rating methodology includes an explicit provision for administrative expenses. The amount allocated for administrative expenses is \$8.00 pmpm plus 5.75% of gross premium. Provisions are also included for risk margin (2.0% of gross premium), premium tax (1.75%) and maintenance tax (\$.070 pmpm).

At the bottom of Exhibit D is a summary of the projected FY2016 cost based on the above assumptions

### **Attachment 3**

#### **Community Experience Analysis**

The following exhibits present a summary of the experience analysis performed for each service area. HHSC utilizes an adjusted community rating methodology in setting the CHIP premium rates. The base community rates by age group vary by service area but are the same for each health plan in a service area. The community rates are developed by a weighted average of the projected FY2016 cost for each health plan in the service area. The weights used in this formula are the projected number of FY2016 members enrolled in each health plan.

Below is a brief description of each of the exhibits contained in the attachment. The exhibits present the derivation of the FY2016 CHIP HMO community premium rates for the following service areas:

Exhibit A – Bexar Area  
Exhibit B – Dallas Area  
Exhibit C – El Paso Area  
Exhibit D – Harris Area  
Exhibit E – Jefferson Area  
Exhibit F – Lubbock Area  
Exhibit G – Nueces Area  
Exhibit H – Rural Service Area (RSA)  
Exhibit I – Tarrant Area  
Exhibit J – Travis Area

These exhibits show projected FY2016 experience for each of the service areas. These amounts were derived by summing amounts from each individual health plan in the service area. The experience analysis for individual HMOs is described in Attachment 2. The top of the exhibit shows summary base period (FY2014) enrollment, premium and claims experience. Trend assumptions for FY2015 and FY2016 are used to project the average base period claims cost to FY2016. Following that are several adjustments to the base period claims cost to account for benefit and provider reimbursement changes.

In addition to incurred claims, provision is also made for services that are capitated by the HMOs, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance we make an assumption regarding how much the HMO is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$0.75 pppm.

The amount allocated for administrative expenses is \$8.00 pppm plus 5.75% of gross premium. Provisions are also included for risk margin (2.0% of gross premium), premium tax (1.75%) and maintenance tax (\$.07 pppm).

At the bottom of the exhibit is a summary of the projected FY2016 cost based on these assumptions.

## **Attachment 4**

### Provider Reimbursement and Benefit Revision Adjustments

This attachment presents information regarding the various provider reimbursement and benefit revision adjustments considered in the rating analysis and how the adjustment factors were developed.

There were several significant revisions to the Texas Medicaid fee schedule which were included in the CHIP rating analysis. The rating adjustments for these provider reimbursement were calculated by applying actual health plan encounter data to the old and new reimbursement basis and the resulting impact determined. The attached exhibits present a summary of the derivation of these adjustment factors.

#### Exhibit A – Inpatient Hospital Reimbursement Change

Exhibit B – Potentially Preventable Readmissions (PPR) Reduction

Exhibit C – Potentially Preventable Complications (PPC) Reduction

Exhibit D – Limit Related Party Reimbursement to 100% of Medicaid

Exhibit E – Outpatient Rural Hospital Reimbursement Change Non-imaging Services

Exhibit F – Outpatient Rural Hospital Reimbursement Change Imaging Services

Exhibit G – Therapy Reimbursement Reduction

Effective September 1, 2014 and again on September 1, 2015 HHSC revised the standard dollar amounts applied to the inpatient reimbursement for certain Children's Hospitals, safety net and trauma hospitals.

Effective May 1, 2013 HHSC implemented revisions to hospital reimbursement to account for Potentially Preventable Readmissions (PPR). The reimbursement reductions amount to 1-2% depending on a hospitals performance during the evaluation time period. New PPR lists will become effective September 1, 2015.

Effective March 1, 2014 HHSC implemented revisions to hospital reimbursement to account for Potentially Preventable Complications (PPC). The reimbursement reductions amount to 2-2.5% depending on a hospitals performance during the evaluation time period. New PPC lists will become effective September 1, 2015.

Effective September 1, 2010, HHSC revised the rating methodology to exclude from the claims experience base any amounts paid by a health plan to a related party in excess of 100% of Medicaid.

Effective September 1, 2015 HHSC will implement revisions to outpatient rural hospital reimbursement. Exhibits E and F present the rating adjustment factors for non imaging services and imaging services respectively.

Effective September 1, 2015 HHSC will implement revisions to the reimbursement for therapy services. Exhibit G presents a summary of the derivation of the rating adjustment factors

For ease of reporting purposes, the numerous provider reimbursement adjustments described above have been consolidated in the community rating exhibits included in Attachment 3. The key below includes a description of where each adjustment has been included in Attachment 3.

  - Exhibit B - Potentially Preventable Readmissions (PPR)
  - Exhibit C - Potentially Preventable Complications (PPC)
  - Exhibit D - Limit Reimbursement to Related Parties

## **Attachment 5**

### **Acuity Risk Adjustment**

The rate setting methodology incorporates a risk adjustment technique that is designed to adjust the base community rate in each service area to reflect the health status, or acuity, of the population enrolled in each health plan. The purpose of acuity risk adjustment is to recognize the anticipated cost differential between multiple health plans in a service area by analyzing the health status of their respective members. The risk analysis was performed by the University of Florida's Institute for Child Health Policy (ICHP). The methodology used to incorporate the risk adjustment is the Chronic Illness and Disability Payment System (CDPS). The attached exhibits (provided by ICHP) present a summary of the risk adjustment analysis. There is a separate exhibit for each age group (Exhibit A-D).

The column titled Case Mix on the chart is the risk adjustment factor. It is the ratio of the predicted average cost of the individual health plan's membership divided by the predicted average cost of the entire service area's membership.

If necessary, an additional adjustment was made to the risk adjustment factors to ensure that, in total, they produce the same premium as the community rates (budget neutral). Exhibit E summarizes the raw, unadjusted risk adjustment factors (case-mix), the budget neutral adjustment applied equally to each risk group within each service area along with the resulting adjusted risk adjustment factors which are used to calculate the risk adjusted community rates.

The risk adjustment factors determined by ICHP for the Under Age 1 category were not applied in developing the FY2016 premium rates due to the relative small size of this category and the resulting variation in acuity scores.

## Footnotes:

- (1) Raw acuity scores as developed by ICHP. Equals the case mix factors from Exhibits A-D.
- (2) Budget neutral adjustment applied uniformly within each service area to ensure acuity adjustment is budget neutral in total.
- (3) Adjusted acuity scores applied to FY2016 Community Rates.

***Attachment 6***

**Delivery Supplemental Payment**

The rate setting methodology includes a risk adjustment technique designed to provide uniform treatment of the health plans for costs related to maternity services. In order to recognize the potential inequity that might arise between health plans with respect to the proportion of maternity cases, HHSC reimburses each plan \$3,100 for each birth.

## **Attachment 7**

### **CHIP Perinatal Rating**

Since January 1, 2007, a new group of clients have been covered under the CHIP program – CHIP Perinatal. The purpose of this program is to extend CHIP services to unborn children of certain non-Medicaid eligible women. Newborns under this program receive the same benefits as current CHIP participants. There is no cost sharing applied to these participants.

The CHIP benefits provided to expectant mothers are more limited in scope. They include the professional component of delivery services (for those clients under 198% FPL) and limited prenatal and post-natal services only.

We have developed premium rates for three categories of clients: (1) newborns between 198% and 202% FPL; (2) expectant mothers under 198% FPL; and (3) expectant mothers between 198% and 202% FPL.

The CHIP Perinatal FY2016 premium rates were derived using a methodology very similar to that described in Section II above for CHIP. Below is a description of the trend, benefit and provider reimbursement adjustments, risk adjustment and administrative cost provisions included in the CHIP Perinatal rates.

#### ***Trend Factors***

The rating methodology uses assumed trend factors to adjust the base period claims cost to the projection period. The cost trend factors used in this analysis are a combination of utilization and inflation components. The projected trend rate assumptions were developed by the actuary based on an analysis of recent experience under the CHIP Perinatal program. The analysis included a review of claims experience data through February 28, 2015.

The FY2015 trend assumption was developed from two components: (i) the actual estimated trend for the period September 2014 through December 2014 and (ii) the projected trend for the period January 2015 through August 2015. The experience trends for all time periods were adjusted to remove the impact of various provider reimbursement reductions and revisions that have impacted the program. We have assumed the trend for the period January 2015 through August 2015 and all of FY2016 will be 5%.

This analysis was used to calculate an annual trend rate assumption of 4.1% for FY2015 and 5.0% for FY2016.

#### ***Provider Reimbursement Adjustment***

The types of adjustments for benefit and provider reimbursement changes, and the methodology for estimating the cost impact of the changes, are the same for CHIP Perinatal as described in Section III above for CHIP.

In addition, the CHIP Perinatal program includes an adjustment to account for Makena utilization increase that does not apply to the traditional CHIP program. During FY2016 it is expected that utilization of Makena will increase as the currently available compound (17P) will be less readily available. Makena has a significantly higher price than 17P and will result in increased medical

cost because it is currently administered by a physician. Exhibit C presents a summary of these adjustment factors.

### ***Administrative Fees and Risk Margin***

The rating methodology includes an explicit provision for health plan administrative services. The amount allocated for administrative expenses is \$12.50 pppm plus 5.75% of gross premium. This amount is intended to provide for all administrative-related services performed by the HMO.

In addition to incurred claims, provision is also made for services that are capitated by the HMOs, such as vision and behavioral health services. The cost of reinsurance is also considered. In developing the cost of reinsurance we make an assumption regarding how much the HMO is expected to receive in reinsurance recoveries (reimbursements from the reinsurance company for large claims). We have assumed that the net cost of reinsurance (reinsurance premium less reinsurance recoveries) is the minimum of (a) the actual reinsurance premium rate and (b) \$0.75 pppm.

The premium rates also include a provision for premium tax (1.75% of premium), maintenance tax (\$0.07 pppm) and a risk margin (2.0% of premium).

### ***Summary***

Exhibit A presents current (FY2015) premium, split between medical, prescription drug, and delivery supplemental payment (DSP) rates; FY2016 premium, split between medical, prescription drug, and DSP rates; and a comparison of FY2015 and FY2016 premium rates. Exhibit B presents the summary community rating exhibit for each service area along with a description of the analysis. The enrollment in both the Newborn 198-202% FPL and Perinate 198-202% FPL risk groups are so small that credible rates could not be set by area. Thus the rates for these two risk groups were calculated on a statewide basis. In addition to the premium, HHSC pays the health plans a \$3,100 delivery supplemental payment (DSP) per maternity delivery for those CHIP Perinatal clients between 198% and 202% FPL.

- (1) Inpatient hospital reimbursement change
- (2) Reduction for potentially preventable readmissions
- (3) Reduction for potentially preventable conditions
- (4) Limit reimbursement to related party
- (5) Outpatient rural hospital reimbursement change - non imaging services
- (6) Outpatient rural hospital reimbursement change - imaging services
- (7) Therapy reimbursement reduction
- (8) Impact of adding Makena to Rx formulary.

***Attachment 8***

**CHIP Dental Rating**

Exhibit A presents a summary of the actuarial model used to derive the FY2016 CHIP Dental premium rates. The premium rates rely on recent dental plan financial experience. Historical claims experience data for the dental plan was analyzed and estimates for the base period January 1<sup>st</sup>, 2014 through December 31<sup>th</sup>, 2014 (CY2014) were developed. The claims experience was trended forward to FY2016 using assumed trend rates of 5.0% for FY2015 and FY2016. An adjustment was also made for an expected increase in utilization as a result of the Pay-for-Quality (P4Q) program.

Provision for administrative expenses (\$1.75 pppm), risk margin (2.0% of premium), premium tax (1.75% of premium) and maintenance tax (\$.023 pppm) were added to the projected claims to produce the FY2016 premium rates.

The bottom of the exhibit shows a summary of the projected FY2016 cost based on these assumptions and the experience rate increase.

Attached Exhibit B presents a summary of the historical CHIP dental plan claims experience.

Attached Exhibit C presents the derivation of the Pay-for-Quality utilization adjustment factors. Effective January 1, 2015, the P4Q program places two percent of each dental plan's premium at risk. In order to retain the full two percent of premium, we have assumed that each dental plan will increase preventive service utilization by closing the gap between the attainable goal and the baseline experience (calendar year 2014) by 15% each year for each of the P4Q measurements. Exhibit C-1 presents the estimated cost increase as a result of the P4Q program. The top of the exhibit shows the CY2014 baseline period measurement value, attainable goal and cost per member receiving services for each of the P4Q measurements. The middle of the exhibit shows the increase in utilization for each of the P4Q measurements needed to close the gap between the attainable goal and the baseline experience by 15% each year. The bottom of the exhibit shows the estimated increase in cost as a result of the P4Q program. Exhibit C-2 presents the derivation of the P4Q adjustment factor by redistributing the estimated increase in cost by age groups.

Footnotes:

(1) Equals the additional cost assuming an increase in utilization for each of the Pay-for-Quality metrics.

Assumes each plan will close the gap between the attainable goal and the baseline experience value by 15% per year.

(2) Additional cost divided by CY2014 Total Incurred Claims.

## **Attachment 9**

### **Pay-for-Quality Program (P4Q)**

The Texas P4Q Program is based on the concept of incremental improvement where each health plan is (1) incentivized to improve its own quality performance each year and (2) evaluated based on its success in achieving such improvement. A gap closure approach to each P4Q quality measure is used where a minimum threshold is set, establishing a minimum quality score at which health plans become eligible to earn positive quality points. Health plans with scores below the minimum threshold for a measure will not be eligible to earn positive points for incremental improvement, but will not be penalized as long as they show year-to-year improvement in the measure. An attainment goal is specified which represents a recognized level of excellence for the specific quality measure. Both minimum thresholds and attainment goals are determined at the discretion of HHSC.

The P4Q measures include:

1. Healthcare Effectiveness Data Information Set Quality of Care Measures
  - o Well-child visits for 3, 4, 5, and 6 year olds
  - o Adolescent well care
2. Potentially Preventable Events
  - o Potentially Preventable Admissions
  - o Potentially Preventable Emergency Department Visits
3. Relative Resource Use Asthma Composite Measure

Each health plan is expected to close the gap between the attainment goal and the health plan's baseline performance by 15 percent each year. This 15 percent annual gap closure target is not referring to a 15 percentage point annual increase in the measure, but is 15 percent of the difference between the attainment goal and the health plan's baseline performance. For example, if a health plan's current performance is 60 percent for the measure and the attainment goal is 70 percent, the gap is 70 percent - 60 percent or 10 percentage points. Correspondingly, 15 percent of the gap equals  $0.15 \times 10$  percentage points or 1.5 percentage points. The 15 percent annual gap closure target will be achieved if the health plan improves from 60 percent to 61.5 percent on the measure. Higher scores on the Healthcare Effectiveness Data Information Set (HEDIS®) measures correspond to higher quality. However, lower Potentially Preventable Event (PPE) expenditures are indicative of higher quality. For this reason, improvement for the PPE measures is defined by a reduction in PPE expenditures. PPE expenditures are calculated using standardized resource units rather than paid amounts to eliminate any extraneous market-based variation that is present in the paid amounts.
