

Attachment J – DPP BHS Preprint Question 43.

43. Describe how this payment arrangement is expected to advance the goal(s) and objective(s) identified in Table 7. If this is part of a multi-year effort, describe this both in terms of this year's payment arrangement and in terms of that of the multi-year payment arrangement.

This new value-based DPP continues to support the state's transition to the CCBHC model of care. This model promotes optimal health for Texans because of the comprehensive range of evidence-based mental health and substance use disorder services, an emphasis on the provision of 24-hour crisis care, care coordination with local primary care and hospital providers, and integration with physical health care. This model also drives improvement in coordination, supporting providers to participate in team based, collaborative, and coordinated care.

Component 1 will provide payment for progress made toward certification or maintenance of CCBHC status, and implementation of activities foundational to quality improvement, such as telehealth services, collaborative care, integration of physical and behavioral health, and improved data exchange. The structure measures selected for inclusion in the program reflect key activities identified through best practices in the Delivery System Reform Incentive Payment (DSRIP) Program. These practices, especially the drive to enhance coordination of care with integration of physical and behavioral health and participation in health information exchanges, help ensure the provision of care in the right place, at the right time. The structure measures for the program are listed below:

Measure ID	Measure Name
B1-101	Certified Community Behavioral Health Clinic (CCBHC) Certification Status
B1-102	Provide patients with services by using remote technology including audio/video, client portals and apps for the provision of services such as telehealth, assessment collection and remote health monitoring/screening
B1-103	Provide integrated physical and behavioral health care services to children and adults with serious mental illness
B1-104	Participate in electronic exchange of clinical data with other healthcare providers/entities

Component 2 includes quality metrics listed in Question 12 that align with CCBHC measures and goals. These evidence-based measures promote effective practices for people with chronic, complex and serious conditions. This CCBHC model also drives improvement in coordination, supporting providers to participate in team based, collaborative, and coordinated care. Year 1 is focused on collecting baseline information and initial comparisons against national benchmarks.
